DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15 and 44, drawn to a micro-dimensional probe array, classified in class 324, subclass 322.
 - II. Claims 16-31, drawn to an electrical contact probe, classified in class 324, subclass 318.
 - III. Claims 32-43, drawn to method of fabricating a probe, classified in class 29, subclass 600.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the array does not require a conductive organic material with the ferromagnetic material coated thereon. The subcombination has separate utility such as in a single probe that does not require for instance the coupling circuit particular to a probe array.
3. Inventions III and I or II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the

process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method of making is limited to Y-shaped nanotubes, the products made can have V-shaped morphology.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Ms. Paula Evans on April 27, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made. Ms. Evans voicemail indicated that she was unavailable.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Louis M. Arana whose telephone number is (571) 272-2236. The examiner can normally be reached on M-Thurs. Fridays Off.
